FENDERCO DELIVERS

flexibility.

Constructed of durable Polyethylene plastic, Fenderco fenders deliver flexibility. Where aluminum and steel fenders are rigid in construction and respond to vibrations or impacts by getting bent up or damaged, Fenderco fenders bounce back. Stones and debris are easily deflected down from a Fenderco fender offering maximum protection against flying stones or debris. The Fenderco fender, although flexible in nature, is durably constructed and is built to withstand temperatures of -40 C to +40 C.

FENDERCO DELIVERS

low maintenance.

Since Fenderco fenders are constructed of plastic, and not steel or aluminum, their non-corrosive properties eliminate the need for painting.

The smooth undersurface of the Fenderco fender prevents mud and snow from building up, therefore eliminating the need to clean the fenders; resulting in increased productivity.

FENDERCO DELIVERS

the right fit.

Fenderco fenders are designed to fit graders, backhoes, big trucks and trailers - single, tandem and tridem axle combinations.

Fenderco fenders are easily installed.

“Fenderco fenders deliver peace of mind. When snow plowing Fenderco fenders virtually alleviate the problem of debris building up on our windshields, not to mention their ability to stop rocks from breaking our costly windshields and rearview mirrors. Combine their great product with customer service second to none and you have the full package. The employees of Free Form have been very accommodating. Any time there has been a problem, they have been there to help resolve it.”

KEN STOCKBURGER
R.M. of Leroy, SK.

“Since 2002 we have been using Fenderco fenders on all our motorgraders at Barnes County. We have tried different brands but they just didn't perform as well as the Fenderco fenders, I guess it's true that you get what you pay for. The Fenderco fenders are strong enough to stand on when necessary and have stood up well to the elements. I would highly recommend them to anyone.”

KERRY JOHNSON
Barnes County, Highway Superintendent
