DELIVERS.

**GRADER  
FENDERS**

for **CAT Graders**

**Fender Suspension Technology** utilizes vibration damping; anti-vibration technology absorbs shock loading on the fenders, and works by minimizing the stress and strain on the fender bracket. Other fender bracket systems have to withstand shock loading, while FST fenders absorb the vibration and impact energy. **The last set of fenders you will ever need!**

NEW

**FST**  
Fender Suspension Technology

## **FENDERCO DELIVERS** flexibility.

Constructed of durable Polyethylene plastic, Fenderco fenders deliver flexibility. Where aluminum and steel fenders are rigid in construction and respond to vibrations or impacts by getting bent up or damaged, Fenderco fenders bounce back. Stones and debris are easily deflected down from a Fenderco fender offering maximum protection against flying stones or debris. The Fenderco fender, although flexible in nature, is durably constructed and is built to withstand temperatures of -40 C to +40 C.

## **FENDERCO DELIVERS** low maintenance.

Since Fenderco fenders are constructed of plastic, and not steel or aluminum, their non-corrosive properties eliminate the need for painting.

The smooth undersurface of the Fenderco fender prevents mud and snow from building up, therefore eliminating the need to clean the fenders; resulting in increased productivity.

## **FENDERCO DELIVERS** the right fit.

Fenderco fenders are designed to fit graders, backhoes, semi trucks and trailers - single, tandem and tridem axle combinations.

Fenderco fenders are easily installed.
