*The Fenderco fender's narrow, but durable profile allows for flexibility which enhances debris deflection and maintains structural integrity.*

*Smooth undersurface helps with the shedding of mud, snow, or other debris resulting in minimized maintenance.*

*Textured outer surface for scuff resistance.*

**FENDERCO DELIVERS**  
flexibility.

Constructed of durable Polyethylene plastic, Fenderco fenders deliver flexibility. Where aluminum and steel fenders are rigid in construction and respond to vibrations or impacts by getting bent up or damaged, Fenderco fenders bounce back. Stones and debris are easily deflected down from a Fenderco fender offering maximum protection against flying stones or debris.

**FENDERCO DELIVERS**  
low maintenance.

Since Fenderco fenders are constructed of plastic, and not steel or aluminum, their non-corrosive properties eliminate the need for painting. The smooth undersurface of the Fenderco fender prevents mud and snow from building up, eliminating the need to clean the fenders; resulting in increased productivity.

**FENDERCO DELIVERS**  
durability.

Fenderco fenders, although light and flexible in nature, are extremely durable and able to withstand an extreme range of temperatures from -40 C to +40 C. Fenderco fenders are impervious to the harsh effects of salt. Fenderco fenders are the toughest poly fender on the road; we guarantee it!
