

FENDERCO FENDERS DELIVER

flexibility.
low maintenance.
the right fit.

Constructed of durable Polyethylene plastic, Fenderco fenders deliver flexibility. Where aluminium and steel fenders are rigid in construction and respond to vibrations or impacts by getting bent up or damaged. Fenderco fenders bounce back. Stones and debris are easily deflected down from a Fenderco fender offering maximum protection against flying stones or debris. The Fenderco fender, although flexible in nature, is durably constructed and is built to withstand temperatures of -40°C to +40°C.

Since Fenderco fenders are constructed of plastic, and not steel or aluminium, their non-corrosive properties eliminate the need for painting

The smooth undersurface of the Fenderco fender prevents mud and snow from building up, therefore eliminating the need to clean the fenders; resulting in increased productivity.

Fenderco fenders are designed to fit graders, backhoes, semi trucks and trailers - single, tandem and tridem axle combinations. Fenderco fenders are impervious to the harsh effects of salt.

Fenderco fenders are the toughest poly fender on the road; we guarantee it!

BACK HOE FENDERS

**DURABLE
RUGGED**

The Fenderco fender's durable profile allows flexibility which enhances debris deflection and maintains structural integrity.

Smooth undersurface helps with the shedding of mud, snow, or other debris resulting in minimized maintenance.

Textured outer surface for scuff resistance.

Where aluminum and steel fenders are rigid in construction and respond to vibrations or impacts by getting bent up or damaged, **Fenderco fenders bounce back.**
